

CLINICAL PATIENT REPORT — TRIALMATCHAI TEST DOCUMENT

Synthetic patient record created specifically to test report extraction, provenance, MET / NOT_MET / UNKNOWN screening, and ClinicalTrials.gov trial matching. This is fictional data and is not for clinical use.

1. Patient Identification

Field	Value
External Patient ID	PT-001
Date of Birth	1981-04-12
Age	45 years
Sex	Female
Report Date	2026-08-15

2. Primary Diagnosis

Field	Value
Primary Diagnosis	Invasive ductal carcinoma of the left breast
Disease Stage	Stage II
Histology	Invasive ductal carcinoma
Disease Status	Non-metastatic breast cancer documented in this synthetic report

3. Biomarker / Pathology Results

Biomarker	Result	Test Date
Estrogen Receptor (ER)	Positive	2026-07-20
Progesterone Receptor (PR)	Positive	2026-07-20
HER2	Negative	2026-07-20
PIK3CA	Not tested / not available	—
BRCA1/2	Not reported	—

4. Current Medications

Medication	Dose	Frequency	Status
Tamoxifen	20 mg	Once daily	Current
Amlodipine	5 mg	Once daily	Current

5. Treatment History

Surgery: Left breast lumpectomy performed on 2026-05-10.

Radiation: Adjuvant radiation therapy completed on 2026-07-01.

Chemotherapy: No chemotherapy administration is documented in this report.

Immunotherapy: No immunotherapy administration is documented in this report.

Targeted therapy: No HER2-targeted therapy is documented in this report.

6. Laboratory Results

Test	Result	Unit	Observed Date
Hemoglobin	13.2	g/dL	2026-08-13
Creatinine	1.2	mg/dL	2026-08-14
WBC	6.4	$\times 10^9/L$	2026-08-13
Platelets	245	$\times 10^9/L$	2026-08-13
AST	24	U/L	2026-08-14
ALT	22	U/L	2026-08-14

7. Performance Status and Clinical Status

Field	Value
ECOG Performance Status	1
Functional Status	Ambulatory and able to carry out light activities
Vital Signs	Not reported in this document

8. Comorbidities

Condition	Status
Hypertension	Active; controlled on amlodipine
Diabetes mellitus	Not documented
Chronic kidney disease	Not documented
Cardiovascular disease	Not documented

9. Allergies

Allergen	Reaction
Penicillin	Rash

10. Pregnancy / Breastfeeding / Reproductive Information

Pregnancy: The report states that the patient is not pregnant at the time of this assessment.

Breastfeeding: The report states that the patient is not breastfeeding.

Contraception: No contraception method is documented in this report.

11. Consent and Communication

Field	Information
Informed Consent	No trial-specific informed consent is documented in this patient report.
Email / Internet Access	Not documented
Ability to Understand / Provide Consent	Not specifically documented

12. Imaging / Metastatic Evaluation

Imaging: No detailed baseline imaging measurements are included in this report.

Distant Metastases: The clinical summary documents non-metastatic disease, but no detailed imaging report is attached.

13. Clinical Summary

This synthetic patient is a 45-year-old female with Stage II invasive ductal carcinoma of the left breast. Tumor testing is ER-positive, PR-positive, and HER2-negative. She underwent lumpectomy followed by radiation therapy and is currently receiving tamoxifen 20 mg once daily. ECOG performance status is 1.

Laboratory results include hemoglobin 13.2 g/dL, creatinine 1.2 mg/dL, WBC $6.4 \times 10^9/L$, platelets $245 \times 10^9/L$, AST 24 U/L, and ALT 22 U/L.

The report explicitly documents no current pregnancy or breastfeeding. It does not provide a contraception method, detailed baseline imaging measurements, trial-specific consent, or email/internet access.

14. Expected Extraction / Matching Test Cases

Expected MET candidates: age 45; female sex; breast cancer diagnosis; ECOG 1; hemoglobin 13.2 g/dL; creatinine 1.2 mg/dL; ER positive; PR positive; HER2 negative; current tamoxifen.

Expected NOT_MET candidate: a trial requiring HER2-positive disease should evaluate HER2-negative status as NOT_MET.

Expected UNKNOWN candidates: contraception use, detailed baseline imaging, trial-specific informed consent, and email/internet access should remain UNKNOWN because the report does not provide sufficient evidence.

Important: absence of a statement must not automatically be interpreted as a negative clinical finding. For example, a missing contraception method is UNKNOWN, not evidence of no contraception.

DEMO / SYNTHETIC DATA ONLY. This document is intended to validate TrialMatchAI's clinical-report extraction and evidence-audit workflow.
